

The Genuine. The Original.

Programing Your Remote Legacy

Use these fast, safe, and extremely easy steps to program your new Overhead Door, hand held garage door opener.

#1.

Make sure your garage door is down. Find a secure ladder and situate it underneath your operator (main motor unit hanging from ceiling). The back of the unit (shown) is where the "LEARN BUTTON" is located.

Learn Button location

#2.

With the remote in one hand, find the "LEARN BUTTON" with the other. The Learn Button is located next to a tiny red light on the right side when you are facing it. By pressing the learn button once, you will activate the light, which will now be blinking.

Also available in keychain style.

3 Button Remote: you may have a 1 or 2 button which looks similar.

#3.

Once the red light is blinking, press your remote button once...twice...and then for a third time. There should be about 1 second in between each press of the button. Your garage door will now open and close with the push of a button!!
